PROJECT WORK

AI Meal Planning App | Backend Developer | Repo — 2025
An AI-powered meal planning app that provides personalized meal plans based on user preferences, dietary restrictions, and health goals.

- **Developed the backend** API to manage user data, meal plans, and preferences using Ruby on Rails.
- **Implemented Devise-JWT authentication** for secure user login and session management.
- **Integrated third-party API** to fetch recipe data and nutrition information.
- **Integrated OpenAI** for alternative meal suggestions, enhancing accuracy in dietary recommendations.
- **Used PostgreSQL to design and optimize the database schema** for meal tracking and user progress, ensuring smooth data management and scalability.
- **Collaborated with frontend and AI integration members** using Git for version control ensuring seamless integration and code collaboration across the project.

Stock Trading App | Backend & Frontend Developer (Admin) | Repo — 2025
A Ruby on Rails stock trading application that allows users to track stock prices in real-time, view market trends, and execute buy and sell trades.

- **Developed the backend for the admin panel**, managing user accounts, transactions, and system data.
- **Implemented administrative features** for monitoring transactions, user activity, and managing platform settings.
- **Designed and developed the frontend** using Tailwind for the login, registration, authentication system, and admin interface, creating intuitive dashboards and ensuring a smooth and secure user experience.
- **Ensured secure access and role-based permissions** for admins using Devise for authentication and authorization.
- **Collaborated with my team** member to ensure seamless data flow and functionality across both backend and frontend.

Journal App | Backend Developer | Repo — 2025
A Ruby on Rails application that allows users to create and organize tasks based on different categories.

- **Created a feature** that lets users organize their tasks through different categories using Rails Associations, enabling full CRUD functionality (Create, Read, Update, Delete) for task management.
- **Utilized Devise gem** to allow users to sign up, log in with their credentials, and sign out from the application.

- **Enabled users** to check their tasks for the day and all the tasks for future references.
- **Tested requests and models** using RSpec for effective development and CRUD validation.

Bank + Budget App | Frontend Developer | Repo | Live 2025

A React application that simulates a simple banking system with extended budgeting features for expense tracking.

- **Implemented deposits, withdrawals, and transfers** with real-time balance updates**.**
- **Built the UI using React and Bootstrap and integrated React-Toastify** for instant success and error notifications.
- **Added budgeting features** for adding, listing, and deleting expenses.
- **Included expense validation** for negative balances.

Tic-Tac-Toe App | Frontend Developer | Repo | Live 2025

A React application that simulates a simple banking system with extended budgeting features for expense tracking.

- **Built the game board using a 2D array to manage the state of moves.**
- **Implemented move history with Previous/Next navigation and a reset function.**
- **Developed game logic entirely with JavaScript, without external libraries.**

Real Estate Landing Page | Frontend Developer | Repo | Live 2025

A responsive product landing page for a real estate website built with semantic HTML and custom CSS.

- **Designed and structured the layout using HTML and CSS,** ensuring clean and maintainable code.
- **Implemented responsive sections with CSS media queries** for property listings, features, and contact forms.
- **Added basic interactivity with JS Bootstrap** for navigation and UI enhancements.
