Technical Support, Advisor I

Aug 2021 - Nov 2022

- Responded to and resolved customer queries promptly via chat and email using Zendesk, specifically addressing technical issues related to virtual reality devices and VR connection to computers.

PROJECT WORK

AI Meal Planning App | Backend Developer | [Repo](#)

2025

An AI-powered meal planning app that provides personalized meal plans based on user preferences, dietary restrictions, and health goals.

- **Developed the backend API** to manage user data, meal plans, and preferences using Ruby on Rails.
- **Implemented Devise-JWT authentication** for secure user login and session management.
- **Integrated third-party API** to fetch recipe data and nutrition information.
- **Integrated OpenAI** for alternative meal suggestions, enhancing accuracy in dietary recommendations.
- **Used PostgreSQL to design and optimize the database schema** for meal tracking and user progress, ensuring smooth data management and scalability.
- **Collaborated with frontend and AI integration members** using Git for version control ensuring seamless integration and code collaboration across the project.

Stock Trading App | Backend & Frontend Developer (Admin) | [Repo](#)

2025

A Ruby on Rails stock trading application that allows users to track stock prices in real-time, view market trends, and execute buy and sell trades.

- **Developed the backend for the admin panel**, managing user accounts, transactions, and system data.
- **Implemented administrative features** for monitoring transactions, user activity, and managing platform settings.
- **Designed and developed the frontend** using Tailwind for the login, registration, authentication system, and admin interface, creating intuitive dashboards and ensuring a smooth and secure user experience.
- **Ensured secure access and role-based permissions** for admins using Devise for authentication and authorization.
- **Collaborated with my team member** to ensure seamless data flow and functionality across both backend and frontend.

Journal App | Backend Developer | [Repo](#)

2025

A Ruby on Rails application that allows users to create and organize tasks based on different categories.

- **Created a feature** that lets users organize their tasks through different categories using Rails Associations, enabling full CRUD functionality (Create, Read, Update, Delete) for task management.
- **Utilized Devise gem** to allow users to sign up, log in with their credentials, and sign out from the application.

- **Enabled users** to check their tasks for the day and all the tasks for future references.
- **Tested requests and models** using RSpec for effective development and CRUD validation.

Bank + Budget App | Frontend Developer | [Repo](#) | [Live](#)

2025

A React application that simulates a simple banking system with extended budgeting features for expense tracking.

- **Implemented deposits, withdrawals, and transfers** with real-time balance updates.
- **Built the UI using React and Bootstrap and integrated React-Toastify** for instant success and error notifications.
- **Added budgeting features** for adding, listing, and deleting expenses.
- **Included expense validation** for negative balances.

Tic-Tac-Toe App | Frontend Developer | [Repo](#) | [Live](#)

2025

A React application that simulates a simple banking system with extended budgeting features for expense tracking.

- **Built the game board using a 2D array to manage the state of moves.**
- **Implemented move history with Previous/Next navigation and a reset function.**
- **Developed game logic entirely with JavaScript, without external libraries.**

Real Estate Landing Page | Frontend Developer | [Repo](#) | [Live](#)

2025

A responsive product landing page for a real estate website built with semantic HTML and custom CSS.

- **Designed and structured the layout using HTML and CSS**, ensuring clean and maintainable code.
- **Implemented responsive sections with CSS media queries** for property listings, features, and contact forms.
- **Added basic interactivity with JS Bootstrap** for navigation and UI enhancements.
